ANDRÉS PINO

Engineering Advisor — Undersea Vehicles & Maritime Energy Systems

CAPABILITY STATEMENT · SAN DIEGO, CA · ACTIVE TOP SECRET CLEARANCE

CORE COMPETENCIES

- **Undersea vehicles (AUV/UUV)** — vehicle electrical architecture, long-endurance operation, in-mission and external recharging, subsea surveillance payload integration.
- **Maritime energy & power systems** — battery systems, power distribution and bus architecture, energy management and regulation, pressure-tolerant power.
- **Power electronics & system design** — power conversion and distribution, precision hardware for harsh environments, prototype-to-production transition.
- **Navy sonar & acoustics** — planar and conformal arrays, towed arrays, dipping sonar, torpedo seekers, transducer R&D, acoustic test and acceptance.
- **Directed energy** — HEL power architecture and scaling, airborne pod integration, weapon-system control segments.

PAST PERFORMANCE

Anduril Industries 2026 – present

Power Electronics and Energy Systems Engineer, Maritime Enabling Technologies. Leads the energy subsystem for an ultra-long-range maritime autonomous vehicle — storage, distribution, regulation, and external charging, from concept through production.

General Atomics Electromagnetic Systems 2025 – 2026

Senior Manager, Power Electronics & System Design. Led the group supporting high-energy laser and electro-optical programs from $50M to $350M+; technical lead on a $90M Reaper-mounted HEL program through PDR.

L3Harris Technologies 2021 – 2025

Chief Engineer / Senior Manager. Directed Navy sonar programs (MK54, LWWAA, HELRAS, TB-29, TB-34A) and led a $50M/yr engineering facility, securing over $150M in new contracts; interfaced directly with NUWC and ONR.

Terradepth 2020 – 2021

Lead Electrical Engineer. Led electrical development of long-endurance AUVs, including a novel heavy-fuel generator for autonomous in-mission battery recharging — one of the longest-endurance vehicles in its class.

Lockheed Martin 2014 – 2019

Senior Electrical Engineer. Electrical lifecycle of the Marlin AUV and the RAP-VLA undersea surveillance system; senior lead hardware engineer on the Layered Laser Defense prototype.

DIFFERENTIATORS

- Currently building ultra-long-range maritime autonomy at Anduril Industries.
- Twenty years carrying undersea and defense hardware from concept through integration, test, manufacturing, and fleet delivery.
- Rare span across undersea autonomy, Navy acoustics, and directed energy, with the power and energy systems common to all three.
- Chief-engineer and P&L experience: owned technical, fiscal, and operational accountability for a $50M/yr engineering facility.
- Active Top Secret clearance; direct working history with NUWC, ONR, and DoD prime contractors.

ENGAGEMENT MODES

Architecture & design review
Independent senior review of system architecture, power and energy design, and integration risk ahead of PDR/CDR.

Trade-space analysis
Quantified trades on vehicle energy storage, power distribution, pressure-tolerant power, and sonar front-ends.

Program & technical due diligence
Independent assessment of an undersea or directed-energy program claim for investors, primes, and program offices.

Fractional chief engineer
Ongoing design authority and review cadence for teams shipping maritime or defense hardware.

COMPANY DATA

PRINCIPAL	Andrés M. Pino, M.S.E.E.
EDUCATION	M.S. Electrical Engineering, Johns Hopkins University · B.S. Electrical Engineering, University of Central Florida
CLEARANCE	Active Top Secret
LOCATION	San Diego, California
NAICS (PROPOSED)	541330 Engineering Services · 541715 R&D in Physical, Engineering & Life Sciences · 541690 Other Scientific & Technical Consulting
